

Jorge Buckley

2225 Hawkins St. Unit 481 Charlotte, NC 28203
813-494-5309 | jbuckley.tech@gmail.com | jorgebuckley.com

PROFILE

- Senior Software Engineer with 6 years of experience designing and shipping production web applications at enterprise scale. Deep expertise in React and TypeScript with full-stack range across Python and Java APIs. Proven technical leader: UI lead across multiple scrum teams, leader of contractor engineers, and React subject-matter expert who interviews candidates and mentors junior developers. Seeking senior product-engineering roles.

EXPERIENCE

American Express

June 2022 – Current

Senior Software Engineer (Engineer III)

- Lead a team of 5 contractor engineers delivering enterprise campaign workflow automation—custom forms and intake flows for card offers, banking offers, and ads budgeting; own technical design, code reviews, and delivery through tight deadlines and shifting requirements. Biggest release: enabled new credit cards to be onboarded onto the platform with a live campaign built on it
- UI technical lead across three scrum teams (~12 engineers) shipping: (1) a generative-AI proof of concept demonstrating GPT-3.5 could be leveraged in-house for marketing headline generation—the pilot that unlocked broader GenAI tooling for marketers; (2) a digital asset manager for card offers with full change history; (3) a content-compliance tool that validates marketing copy against brand and legal guidelines—language permissions, offer accuracy—using document OCR
- Built a shared React component library organized by digital-asset-manager feature, adopted across applications and repositories by all teams
- Designed and shipped Python REST APIs using Google Document AI to extract structured data from 5–15 page documents processed roughly a dozen times daily; automated manual review by flagging discrepancies and pointing reviewers to approved language in the digital asset manager
- React subject-matter expert: lead technical interviews for engineering candidates, assessing technical depth and team fit
- Mentor junior engineers on React best practices, performance optimization, and testing; enforce quality through detailed pull-request reviews
- Drove extensive front-end test coverage with Jest and React Testing Library, ensuring reliable pre-deployment quality

Software Engineer (Engineer II)

- Led UI development of a digital asset manager for card-offer marketing using React and JavaScript
- Produced Sketch UX mockups for new features while maintaining Amex brand design-system standards

Accenture

August 2020 – June 2022

Technology Senior Analyst

- Modernized PEGA applications to Web Content Accessibility Guidelines (WCAG) 2.1 and ADA standards using custom JavaScript, template updates, and UI/UX mockups
- Built Boomi test coverage for Salesforce EHR integrations; wrote SOQL queries to validate vaccination-record data

PROJECTS

PointPower – React Native app that optimizes credit-card rewards against user-defined goals

Smart Wallet – Full-stack financial planning app built with React, TypeScript, and AI-assisted development

Jorgebuckley.com – Personal site built with Astro, Tailwind CSS, and TypeScript

EDUCATION

University of Florida

2016 – 2020

Computer Science, B.S.E.

SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL, HTML/CSS

Front-End: React, Redux, React Native, Angular

Back-End: Node.js, Express, REST, GraphQL

Data: PostgreSQL, MongoDB

Tools: Git, Jest, React Testing Library, Figma, Sketch

Spoken: English, Spanish (conversational)
